Attention of	Rt Hon Matt Hancock MP - Secretary of State
Department	Health and Social Care
Address	House of Commons London SW1A 0AA
Your Reference	
My Reference	HPP/WJ/MH/01
Date	31 May 2020
Subject	<b>Covid-19 pandemic - Government Health Policy and Process</b>

Dear Secretary of State

I refer to the above subject and, specifically, to the decision by the U S Government [USA] on 28 May 2020 to end association with, and funding of, the **World Health Organisation** [WHO] in view of serious concerns regarding their oversight and guidance / instructions during the Covid-19 pandemic. Funding in the sum of \$450 million per annum was previously provided to the WHO by USA. In view of this action by USA I would be grateful if you could confirm whether the UK Government continue to have confidence in the Covid-19 guidance / instructions issued by the WHO, taking into consideration the following issues that have been identified to date.

1. The death classification process from Covid-19 is based on a positive result from a test using "SARS - CoV-2 Coronavirus Multiplex RT-qPCR kit". The test manufacturer confirms that the test should only be used for research purpose and not for clinical diagnosis. The relevant abstract is reproduced below. Do you consider that this has led to misreporting of deaths from Covid-19 virus by the UK Government and Media [including the British Broadcasting Corporation {BBC}]

**SARS-CoV-2 Coronavirus Multiplex RT-qPCR Kit  
(CD019RT)**

This product is for research use only and is not intended for diagnostic use.

2. Although computer models, endorsed by WHO, have not been subject to peer review their outputs / predictions have been used to drive UK Government health policy and process. This has resulted in the lock-down of the UK economy with increased borrowing requirement for the Treasury, currently in the region of £400 billion. It has also resulted in substantial capital investment in additional hospital capacity [under the "Nightingale" programme], with the hospitals now mothballed and empty. The use of these flawed computer models has also resulted in significant delay in diagnosis and treatment of cancer patients, and others with life-threatening conditions, generating a future crisis for the National Health Service. Do you consider that an independent investigation is now justified in order to establish the facts regarding these flawed computer models and the source of funding to develop the models.
3. A possible conflict of interest as a result of funding provided to WHO by the "Bill and Melinda Gates Foundation [BMGF]" who are in a position to benefit financially through their substantial shareholding in major pharmaceutical companies that will deliver a Covid-19 solution [through a global vaccination programme and / or other countermeasures]. Does the UK Government consider that the BMGF should be in a position [through the funding provided] to dictate health policy and process to democratically elected national governments, given the serious **medical** and **economic** consequences. Funding provided by BMGF to WHO is in the region of £4.3 billion. The WHO coordinate, advise and instruct national governments on healthcare policy and process. Your scientific advisors receive substantial funding from the BMGF: Imperial College London £280 million,

University of Oxford £243 million, Departments overseen by Professor Chris Witty England's Chief Medical Officer £40 million.

4. Does the UK Government endorse the action taken by USA on 28 May 2020 to issue an "executive order" preventing online censorship. Does the UK Government agree that the views of eminent members of the medical profession regarding the Covid-19 pandemic should not be censored in a free society. Additionally, does the UK Government accept that there may be a conflict of interest at the BBC given the funding, in the region of £56 million, provided to its subsidiary company "BBC Media Action" by the BMGF. I offer the following as evidence in support of my assertion. None of the following eminent members of the medical profession, who have clear views and guidance on how to manage the Covid-19 crisis, have been interviewed by BBC News broadcasters: Dr Andrew Kaufman, Dr Rashid Buttar, Professor Dolores Cahill, Professor Knut Wittkowski Dr Judy Mikovits Dr Shiva Ayyadurai.

I look forward to your response to my concerns as set out above at your earliest convenience. Thank you.

Yours sincerely

*W Jones*
