

# ARE YOU WILLING TO TAKE THE RISK?

Quote from Dr. Michael Yeadon, former Vice President, CEO & Chief Medical Officer at Pfizer

## FACTS

- You are being asked to take an experimental gene therapy injection never before used on humans, for a supposed disease that 99.97% of people make a full and total recovery from. 0.03% have died – they had pre existing medical problems and the average age of those who have died is 84.
- The SARS Cov-2 'virus' has NOT been isolated and identified. It's genome gaps have been created from computer modelling. The existence of a deadly virus has not been established therefore it's not possible to distinguish between death from a deadly new 'virus' or from an annual winter flu (relabelled as Covid-19 disease)
- The 'vaccine' manufacturers have refused to reveal a full list of ingredients in their injections. Why?
- Independent laboratories around the world have analysed the contents of the 'vaccine' and discovered the main ingredient is graphene oxide a deadly poisonous substance, along with mRNA material, and a list of metals and other substances including polyethylene glycol & formaldehyde – with a long list of other poisonous/ toxic ingredients, not revealed by vaccine manufacturers.
- The choice is yours, but first check the deaths and adverse effects data available on the government Yellow Card reporting system run by the MHRA.
- If you are happy with the risks think of your children, family and loved ones. Do you want them to become a genocide statistic?
